**TARIFF FORMAT**

**A. Page Numbering** - Page numbers appear in the upper right corner of the Page. Pages are numbered sequentially. However, occasionally, when a new Page is added between Pages already in effect, a decimal is added. For example, a new Page added between Pages 14 and 15 would be 14.1.

**B. Page Revision Numbers** - Revision numbers also appear in the upper right corner of each Page. These numbers are used to determine the most current Page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd Revised Page 14. Because of various suspension periods, deferrals, etc. the Commission follows in its tariff approval process, the most current Page number on file with the Commission is not always the Page in effect. Consult the Check Sheet for the Page currently in effect.

**C. Paragraph Numbering Sequence** – There are nine levels of paragraph coding. Each level of code is subservient to its next higher level:

- 2.
- 2.1.
- 2.1.1
- 2.1.1.A.
- 2.1.1.A.1.
- 2.1.1.A.1.(a).
- 2.1.1.A.1.(a).I.
- 2.1.1.A.1.(a).I.(i).
- 2.1.1.A.1.(a).I.(i).(1).

**D. Check Sheet** - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the Pages contained in the tariff with a cross-reference to the current revision number. When new Pages are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this Page if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some Pages). The tariff user should refer to the latest Check Sheet to find if a particular Page is the most current on file with the Commission.

COMPETITIVE LOCAL EXCHANGE CARRIER**SECTION 2 - RULES AND REGULATIONS, Continued****2.20 INTRALATA PRESUBSCRIPTION PLAN**

## 2.20.1 Toll Presubscription

- A. Toll Presubscription is a procedure whereby a customer designates to the Telephone Company the IntraLATA and InterLATA Toll Providers, i.e., Interexchange Carriers (IXCs) which the customer wishes to be the carriers of choice for toll calls. Such calls are automatically directed to the designated carrier(s) without the need to use carrier access codes or additional dialing to direct the calls to the designated carrier. Toll presubscription does not prevent a customer, who has presubscribed to a toll carrier, from using carrier access codes or additional dialing to direct calls to an alternative toll carrier on a per call basis.

Each carrier will have one or more access codes assigned to it for various types of service. When an end user selects a carrier as its preferred IXC, only one access code of that carrier may be incorporated into the switching system of the Telephone Company permitting access to that carrier by the end user without dialing an access code. Should the same end user wish to use other services of the same carrier, it will be necessary for the end user to dial the necessary access code(s) to reach that carrier's other service(s).

An IXC must use Feature Group D (FGD) Switched Access Service to qualify as a presubscription toll provider unless prior arrangements have been made with or by the Telephone Company. IXCs must submit an Access Service Request (ASR) to the Telephone Company.

Selection of toll presubscription provider by an end user is subject to the terms and conditions following.

- B. At the option of the IXCs, the nonrecurring charge for a change in toll presubscription, as provided herein, may be billed to the IXCs, instead of the end user. This may involve charges resulting from end-user initial free choice Preferred Interexchange Carrier (PIC), as specified in C.1 following.

## 2.20.1 Toll Presubscription, Continued

## C. Presubscription Charge Application

## 1. End user choices for toll presubscription:

Designating an intraLATA and interLATA IXC(s) as primary carrier(s) thereby requiring no access code to access those IXCs' service. End users are not required to choose the same IXC for intraLATA and interLATA toll presubscription. Other nonpresubscribed IXCs are accessed by dialing 10XXX, 101XXXX, or other required codes.

Choosing no carrier as a primary carrier thus requiring 10XXX or 101XXXX code dialing to access all IXCs.

2. If a new customer cannot decide upon presubscription IXCs, the Telephone Company may extend a 30-day period following completion of the initial service request to make a choice without charge. In the interim, the customer will be assigned as a 'No-PIC' and must dial an access code to make toll calls.
3. If an IXC elects to discontinue Feature Group, the IXC is obligated to contact, in writing, all end users who have selected the canceling IXC as their preferred toll provider. The IXC must inform the end users that it is canceling its Feature Group D Service, request that the end user select a new IXC, and state that the canceling IXC will pay the PIC change charge as provided herein. The IXC must provide written notification to the Telephone Company that this activity has taken place.

Following the IXC's discontinuance of service, the Telephone Company will bill the canceling IXC the change charge for each end user that is currently designated to the IXC at the time of discontinuance.

4. An unauthorized PIC change is a change in the presubscribed IXC that the end user denies authorizing. PIC disputes for end users are resolved through an investigative process.

If an unauthorized change in toll presubscription occurs, the IXC making the unauthorized change will be assessed a charge for unauthorized change in presubscription as provided at the end of this section. In addition, the IXC will be assessed the applicable charge for returning the end user to the preferred IXC.

D. End User Charge Discrepancy

1. When a discrepancy is determined regarding an end user's designation of a presubscription IXC, the following applies depending upon the situation described:

- A signed letter of authorization takes precedence over any order other than subsequent, direct customer contact with the Telephone Company.

- When two or more orders are received for an end user line generated by telemarketing, the date field on the mechanized record used to transmit PIC change information will be used as the PIC authorization date. The order with the latest application date/time determines customer choice.

- If an end user denies requesting a change in toll presubscription as submitted by an IXC, and the IXC is unable to produce a letter of authorization, signed by the end user, the IXC will be assessed all applicable change charges. The nonrecurring change charges are provided herein. The IXC will also be assessed the presubscription change charge of \$7.00, which was previously billed to the end user.

2. Verification of Orders for Telemarketing

Neither the IXC or the Telephone Company shall submit a PIC change order generated by outbound telemarketing unless and until the order has first been confirmed in accordance with the F.C.C.'s current anti-slamming practices and procedures.

E. PIC Switchback Option-Business/Residence

PIC Switchback is an option under which no investigation activities are performed by the Telephone Company when an end user denies requesting a change in primary toll carrier submitted by the IXCs. The IXC participating in PIC Switchback will be billed the PIC Switchback Charge, and the presubscription change charge, as specified herein, to switch the end user to the end user's previous carrier.

When the Telephone Company is contacted by an end user who denies requesting a change in primary toll carrier, the end user will be credited the charge assessed for the disputed change in carrier, and will be switched back to the previous IXC at no charge. If this service is made available by the Telephone Company, IXCs may subscribe to or cancel PIC Switchback Service on 30 days notice to the Telephone Company by submitting a written request. A letter of authorization from the IXC will not be requested or accepted at a later date in the event of dispute of the charges assessed under the PIC Switchback option.

This option in no way relieves an IXC of the F.C.C. requirements for verifying all PIC orders obtained by outbound telemarketing prior to submitting those orders, or instituting steps to obtain verification of orders submitted to the Telephone Company. In addition, the end user has the option of initiating a complaint to the F.C.C. or the Pennsylvania Public Utility Commission's Bureau of Consumer Services concerning unauthorized changes in toll presubscription.

## 2.21.2. GENERAL

The Service Access Code 9-1-1 allows the customer to reach the appropriate emergency services including police, fire and medical services. Enhanced 9-1-1 has the ability to selectively route an emergency call to the primary 9-1-1 provider so that it reaches the correct emergency service located closest to the caller. In addition, the Customer's address and telephone information will be displayed to the primary 9-1-1 provider for display at the Public Answering Point (PSAP).

Pursuant to the Public Safety Emergency Telephone Act (Act 78 of 1990), as amended, the Telephone Company collects a fee from its customers on behalf of the counties in its operating area to support the 9-1-1 system. Counties of the first through second class may impose a monthly contribution rate in an amount not to exceed \$1 per line on each local exchange access line. Counties of the third through fifth class may impose a monthly contribution rate in an amount not to exceed \$1.25 per line on each local exchange access line. Counties of the sixth through the eighth class may impose a monthly contribution rate not to exceed \$1.50 per line on each local exchange access line. The contribution rate may be used by counties for the expenses of implementing, expanding or upgrading a 911 system.

Parties dialing 9-1-1 waive the privacy afforded by non-listed and non-published service to the extent that the telephone number, names, and address associated with the originating station location are furnished to the Public Safety Answering Point.

## 3.2.13. Custom Calling Services

- A. Description  
Custom Calling Services consist of optional service features for use in connection with a customer's Local Exchange Service.
- B. Services

**Anonymous Call Rejection** is an arrangement that allows a called party to reject calls from parties that have activated the \*67 Per Call Blocking feature to prevent the display of the calling telephone numbers to Caller ID subscribers, or to prevent the display of the calling telephone numbers and associate main listed names to Caller ID with Name subscribers. When Anonymous Call Rejection is activated, such calls will be routed to an announcement which tells the calling party that the called party will not accept calls from caller who have chosen to prevent the display of their telephone numbers and names. The calling party will be instructed to hang up and place the call again, without activating the \*67 Per Call Blocking feature. Customers may activate or deactivate Anonymous Call Rejection by dialing an activation code. This arrangement is included with the Caller ID and Caller ID with Name features and is available to non-Caller ID with Name customers.

**Call Block** is an arrangement which prevents future calls from up to six pre-specified telephone number, one of which may be the most recent incoming call from an unknown telephone number immediately after the unwanted call has been received. Callers from the pre-specified telephone numbers will receive an announcement that the called party is not accepting calls. For calls from a line within a multiline hunting group, the call will be blocked only when the main telephone number is included as one of the six pre-specified telephone numbers.

**Call Forwarding** is an arrangement whereby incoming calls may be transferred to another telephone number by dialing a prefix code and the telephone number of the service to which calls are to be transferred. Calls forwarded by this feature are subject to local and long distance message charges. This service contemplates that normal transmission performance quality cannot be guaranteed to all calls.

**Call Trace** is an arrangement which permits the customer to trace the last call received. The result of the call trace is automatically sent to the Company for subsequent furnishing to legally constituted law enforcement agencies or authorities upon proper request by them. The call trace result is not available to the customer. The Company is not liable for damages, if, for any reason, the call trace attempt is not successful.

## 3.2.13. Custom Calling Services, Continued

## B. Services, Continued

**Call Waiting** is an arrangement whereby a customer who is using an exchange line arranged for call waiting is alerted, by means of a tone signal, when another caller is trying to reach that line. The customer, by flashing the switch hook, is able to have alternate conversation between parties. Where facilities permit, the incoming call tone signal may be blocked on a per call basis. At the completion of the call, the call waiting feature is automatically reactivated.

**Caller ID Manager with Name** is an enhancement of the Call Waiting feature offered to residence and business customers that allows the "called" party to control the treatment of a second incoming call. Caller ID Manager with Name allows a customer who is on a call to receive the name and telephone number of a second caller and then determine how they want to manage that call by selecting one of the following options: put the first call on hold and answer the second call; connect the second caller to a hold announcement; drop the existing call and connect to the second caller; connect the second caller to a busy announcement; conference the existing call with the second caller; or send the second caller directly to Answer Call or another answering service. The name and telephone number of the second caller and options available for handling the second call will be displayed on a customer-provided Analog Display Services Interface (ADSI) screen telephone.

**Caller ID** is an arrangement which permits a customer with Local Exchange service, other than foreign exchange, foreign zone or foreign central office services provisioned over interoffice facilities, to receive the calling telephone number for calls placed to the customer. The calling telephone number will be forwarded from the terminating central office to compatible customer-provided display equipment associated with a customer's Local Exchange Service. The calling telephone number will be delivered during the first silent interval of ringing. For calls originating from a line within a multiline hunting group, only the main telephone number will be delivered. If the calling telephone number is not available for forwarding to the called party, a message indicating that unavailability will be forwarded. The calling party can prevent the Caller ID customer from seeing the calling telephone number display by dialing a special code prior to placing each call. This is known as Per Call Blocking. When the calling party uses this blocking capability, the Caller ID customer will receive an indication on the Caller ID equipment that the display of the calling telephone number has been suppressed. There is not charge for using Per Call Blocking. Caller ID customers may re-direct to an announcement, incoming calls with Per Call Blocking activated, by activating the Anonymous Call Rejection arrangement.

## B. Services, Continued

**Caller ID with Name** is an arrangement which permits a customer with Local Exchange service, other than foreign exchange, foreign zone or foreign central office services provisioned over interoffice facilities, to receive the calling telephone number and the main listed name associate with the calling telephone number for calls placed to the customer. The calling telephone number and name will be forwarded from the terminating central office to compatible customer-provided display equipment associated with a customer's Local Exchange Service. For calls originating from a line within a multiline hunting group, only the main telephone number and name will be delivered. If the calling telephone number and name is not available for forwarding to the called party, a message indicating that unavailability will be forwarded. The calling party can prevent the Caller ID With Name customer from seeing the calling telephone number and name display by activating Per Call Blocking. There is no charge for using Per Call Blocking. When the calling party uses this blocking capability, the Caller ID With Name customer will receive an indication on the Caller ID With Name equipment that the display of the calling telephone number and name has been suppressed. Caller ID With Name customers may redirect to an announcement, incoming calls with Per Call Blocking activated, by activating the Anonymous Call Rejection arrangement. Where facilities permit and when requested by a subscriber to Call Waiting, the calling name and number will display when Call Waiting is activated and this requires the next version of Caller ID with Name CPE.

**Distinctive Ring** is a feature which allows a customer to have up to three separate telephone numbers assigned to one local exchange line. Each telephone number will provide a distinctive ring on incoming calls to allow for identification of the incoming call. A distinctive call waiting tone for each telephone number will be provided, where facilities permit, to customers also subscribing to call waiting.

**Priority Call** is an arrangement which provides for one distinctive audible signal to the customer when a call is received from one of up to six pre-specified telephone number. If the customer also subscribes to call waiting, and the incoming call arrives while the line is busy, the usual call waiting tone is altered with a distinctive pattern. For calls originating from a line within a multiline hunting group, the distinctive signal is only produced when the caller's main telephone number is one of those pre-specified.

**Repeat Dialing** is an arrangement which permits the customer to redial automatically the last number dialed. If the called line is found to be busy, a 30-minute queuing process begins. The customer is then given an indication that the network will attempt to set up the call when called line is idle. The network periodically test the busy/idle status of the called line until both lines are idle.

**\*69** is an arrangement which provides the customer with an announcement of the last phone number that called the. To activate \*69, the customer presses \*69. The customer then hears an announcement which tells them the telephone number of the last party that called them. If the called line is found to be busy, a 30-minute queuing process begins. The customer is then given an indication that the network will attempt to set up the call when the called line is idle. The network periodically tests the busy/idle status of the called line until both lines are found idle or the queuing process expires.

A \*69 activation is considered complete and billable after the feature is activated by dialing \*69, regardless of whether or not the call is returned, except in cases where the calling number is not available from the network (e.g., calls outside the calling area, cellular numbers, etc.). If the caller has activated Per Calling Blocking, the called party will receive an announcement that the calling party is private. This call can still be returned and is billable. Non-published and non-listed numbers will be announced.

## 3.2.14. Per Call Blocking

Per-Call Blocking is automatically available to all customers served by the Company. This blocking option allows the calling party to block the passage of their telephone number and name on out-going calls. To activate Per-Call Blocking a special code is dialed prior to placing each call.

When this blocking feature is activated by the calling party, and they place a call to a Caller ID subscriber, the subscriber's display unit will indicate that the incoming call has been blocked. Caller ID Per-Call Blocking does not prevent the delivery of telephone numbers to 911 emergency service providers.

## 3.2.15. Per-Line Blocking

The calling party may prevent the display of their telephone number and name on a permanent basis by subscribing to Per-Line Blocking. This blocking option automatically prevents the display of the calling number and name for calls placed from that line to a Caller ID subscriber, unless the feature is deactivated. If a subscriber of Per-Line Blocking chooses to deactivate blocking, the calling telephone number and name would be sent for that call only. After the call is completed, the line automatically reverts back to the Per-Line Blocking feature. The deactivation of Per-Line Blocking is completed by dialing a special code prior to placing each call. The code to deactivate Per-Line Blocking is different than the one used to deactivate Per-Call Blocking. Caller ID Per-Line Blocking will be available to all Customers in the Company's serving area. The Per-Line Blocking option can only be added or removed from a Customer's line by placing a service order with the Company. When this service is removed the line automatically converts to the Per-Call Blocking capability.

3.2.16. 900/976 Blocking

**900/976 Blocking** is provided at the Customer's request and gives the Customer the ability to restrict calls for his/her exchange access line to 900 service access. This service is provided for use with individual residence lines, business lines and Centrex lines where facilities permit. The initial blocking of a customer's line or lines will be provided at no charge to the customer. Subsequent blocking (after an intervening elimination of the Blocking Option at the customer's request) will be subject to a nonrecurring charge of \$10.00. There is no charge for unblocking.

This option blocks access to all calls dialed as 1+900-NXX-XXX and 0+900-NXX-XXXX from the customer's exchange access line. These blocked calls will be directed to a central office announcement. Attempts to place a 900 call using an operator will continue to be denied.

This option does not prevent customers from placing 900 calls from their exchange access line using Operator Service Providers other than Carrier. In addition, this option does not prevent customers from placing operator-assisted or credit card calls to 900 services from a line which is not blocked.

## 4.1.1 General

The Pennsylvania Telecommunications Relay Service (PA TRS) is a relay telecommunication service for the deaf, hard of hearing, hearing and/or speech disabled population of the Commonwealth. The PA TRS is mandated by the Americans with Disabilities Act of 1990 to provide functionally equivalent telephone services that are available to other U.S. citizens, at no additional cost. The PA TRS includes both traditional relay (devices such as Teletypewriters (TTY) and Telecommunication Devices for the Deaf (TDD)) and captioned-telephone voice-carry-over relay services (captioned telephone). These relay services permit telephone communications between individuals with hearing and/or speech disabilities, who must use a TTY, TDD or captioned telephone, with individuals having normal hearing and speech. Additionally, 711 abbreviated dialing is available to access the PA TRS. The Company's switching equipment is arranged to translate the "711" calls to the assigned toll-free number, (888) 895-1197, in order to route calls to the Telecommunications Relay Service Provider, in accordance with Commission's Order entered on February 4, 2000 at Docket No. M-00900239.

## 4.1.2 Surcharge

In addition to the charges provided in this tariff, a surcharge will apply to all residence and business access lines served by this Company. (Access lines are those lines extending from the telephone company's central office to the end-user's premises.) This surcharge applies regardless of whether or not the access line uses the PA TRS.

The surcharge serves as the funding vehicle for the operation of the PA TRS, Telecommunications Device Distribution Program and the Print Media Access Service Program and shall be calculated by the Pennsylvania Public Utility Commission (the Commission). The Commission shall compute the PA TRS surcharge each year and notify local exchange carriers of the surcharge amount to be applied for the twelve-month period commencing with July 1 of each year.

The Commission may revise the surcharge more frequently than annually at its discretion.
